

Micro Dentistry

The Latest in Dental Technology!

WITHOUT THE USE OF DRILLS OR INJECTIONS

*You do not feel any discomfort because the **Air Abrasion** does not produce the heat, friction, vibration, and the noise that is generated by a conventional drill!!*

REMEMBER . . . NO injection, NO numbness, and NO drooping lip!!!! FANTASTIC!!! Your tooth is filled with a NEARLY INVISIBLE, NON-MERCURY filling, then bonded with a curing light. These factors make your visit more comfortable and produce a STRONG, DECAY-RESISTANT FILLING. Your tooth is not subjected to the trauma and potential after-effects of a high speed drill, which may actually cause tiny micro-fractures in the enamel, leaving the tooth much more susceptible to fracture at a later date.

Sharing your experience in our office with these new, state-of-the art products would be the nicest compliment you could pay us! We welcome the referral of your family and friends to our office for "tomorrow's dentistry today!"
